

Testing and Evaluating RFID Projects with Fluensee

Real-World Examination, Analysis and Recommendations for Customers Evaluating RFID Solutions

How do I know that this RFID tag and its infrastructure will perform well in my operating environment, under harsh conditions and with prolonged exposure to the elements?

That's a good question. And one that you want answered before you implement an entire technology solution. Fluensee offers end-to-end RFID solutions to better track and manage your fixed and mobile assets and inventory. Part of that solution can include the testing and analysis of products or containers enabled with RFID, to provide you with detailed information into the functional capabilities and requirements of RFID within various operating and environmental conditions.

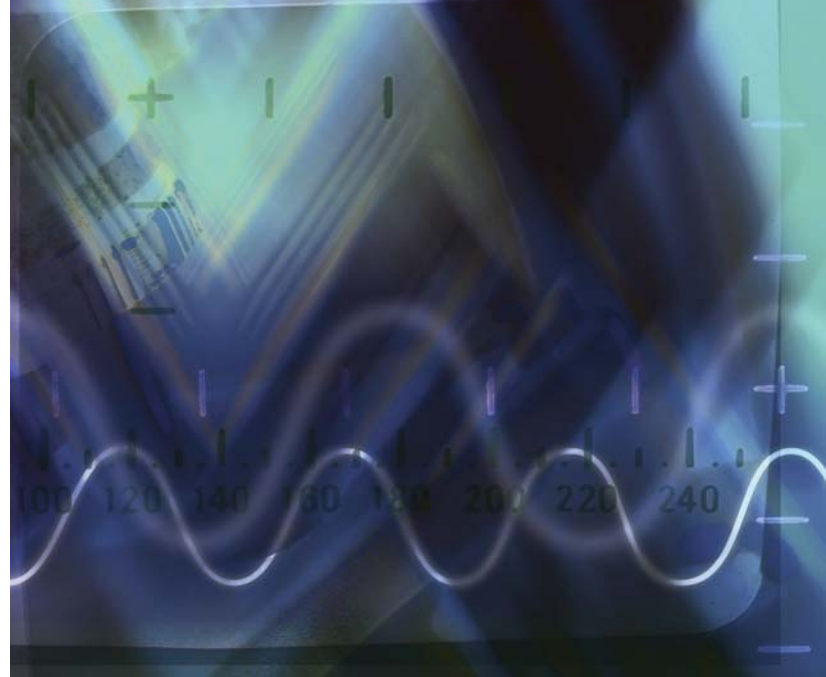

That's where Percept comes in. Percept Technology Labs partners with Fluensee to provide specialized RFID testing expertise in its 5,000 square foot real-world and environmentally-controlled testing labs.

Fluensee's RFID Solution Enhanced

Percept extends Fluensee's end-to-end RFID solution to track and manage your high-value fixed or mobile assets. Fluensee already tests the physical and structural aspects of RFID tags, antennas, readers and other related hardware. However, by leveraging Percept's testing expertise and specialized labs, Fluensee offers customers a more comprehensive analysis of specific operating characteristics and provides recommendations in a condensed timeframe. This eliminates much of the uncertainty of implementing RFID solutions in complex or harsh environments. The detailed data and expert recommendations help today's buyers accelerate the realization of increased efficiency and profitability from RFID solutions.

"We are extremely pleased to be selected by Fluensee as the testing partner for their industry-leading RFID solutions. Our team has extensive experience in managing and executing testing and analysis for small, medium and large companies looking to implement new products and systems in the marketplace. Our expertise enables Fluensee to implement their solution suite with confidence and success as we test and prove product functionality and performance through our rigorous testing methodologies."

John Mozeliak
President and Chief Operating Officer
Percept Technology Labs

Full-Service RFID Testing

Working with the Percept team in the specialized RFID testing facility, Fluensee can offer customers full-service testing throughout the product lifecycle, to identify design, compliance and reliability issues. Comprehensive testing services include:

- ◆ Environmental operations (heat, cold, moisture, and UV effects on RFID tag and reader operations)
- ◆ Shock and vibration impact to the operation of RFID hardware
- ◆ Antenna coverage, tag configurations, range and breadth of signal confirmation
- ◆ Failure analysis
- ◆ Infrastructure design and configuration
- ◆ Competitive hardware analysis and testing
- ◆ Functional and reliability testing
- ◆ Battery testing (active tag testing, battery performance and life)

Once the testing results are complete, Fluensee's RFID engineers can work side-by-side with Percept's engineers to develop successful, cost-effective solutions to address the specific needs of the customer.

a fluent partnership

About Fluensee

Fluensee's RFID-enabled asset tracking and supply chain management solutions improve the visibility, accuracy, security and utilization of a company's mobile and fixed assets. Its end-to-end solutions combine highly configurable and patented software and implementation services with hardware from leading RFID, barcode, GPS and sensor technology providers. Real-time asset location, condition and alerts result in a more efficient use of inventory, improved utilization and reduced operating costs. Formerly Applied Logistics, Fluensee is a privately held company with headquarters in Englewood, Colorado. **On the Net: www.fluensee.com.**

About Percept Technology Labs

Percept Technology Labs is an established, independent product test and consulting company with a proven track record of helping customers test and improve their products since 1996. Specializing in data storage, ITE and consumer electronics products, Percept does more than simply test products in its 5,000 square foot real-world and environmentally-controlled lab spaces. With years of specialized technology testing experience and absolute commitment to customer care, the Percept team manages the entire product testing, improvement and certification process from start to finish. Percept provides everything clients need to launch and deliver their products around the world on time and within budget. Customers include leading information technology equipment (ITE), data storage, consumer electronics, scientific instrumentation, and telecommunications firms.
