

How Customers are Using and Benefiting from RFID

Highlights

- Automated asset tracking
- Real-time, accurate inventory
- Reduced labor
- Simple shipping & receiving
- Increased time savings
- Reduced loss or theft
- Better customer support
- Improved asset security
- Regulatory compliance

Fluensee and RFID being tapped for tracking IT assets, returnables, equipment and more

Companies of all sizes and types are seeing results from Fluensee's web-based, end-to-end solution. AssetTrack™ provides companies with the tools needed to gain more visibility, information and control of their assets with an automated RFID solution.

Software: AssetTrack provides an array of features including asset location, inventory reports, repair and maintenance details, exception alerts, workflow planning, and asset history. AssetTrack integrates with existing applications or platforms and can scale as your business grows.

Hardware: Fluensee's solution is hardware-agnostic, meaning the best technology for your requirements is used. Even as new data capture technology becomes available, AssetTrack can take advantage of it. You aren't stuck with a hardware company's software that can only use their technology.

Services: Fluensee's experts can help you plan your implementation, update your operational processes and implement our full solution, which includes training and ongoing support.

The following represents how companies have found results with Fluensee's solution.

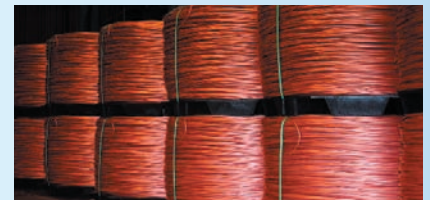

IT Assets

- Customer's time to take inventory decreased by 50%
- Missing assets found in a fraction of the time it takes to search manually - from days to minutes
- Staff receives proactive notifications of unauthorized asset moves
- Improved security of IT assets and sensitive information

Pallet Tracking

- Client uses 1/15 the number of pallets after AssetTrack was implemented
- Saving \$100,000 per month (better assets, better visibility)
- Improved asset utilization and recording of turns
- Automated shipping documents speeds up processes
- Visibility of pallets at customer sites enables charges for late returns

Equipment Management

- Company enjoys 100% automated shipping and receiving
- Real-time, accurate inventory without opening every crate
- Improved equipment utilization and asset visibility
- Less overbooking of equipment
- Reduced equipment loss
